Summary

Software engineer with 2+ years at Oracle developing Java and database enhancements for enterprise utility systems. Experience in production troubleshooting, workflow development, and release validation, complemented by projects in Golang service reliability, Spring Boot observability, and Python-based RAG applications.

Technical Skills

Languages: Java, Go (Golang), Python, SQL, PL/SQL, JavaScript

Backend & Data: Spring Boot, REST APIs, JDBC, Hibernate, Oracle Database, PostgreSQL, Kafka

AI Applications: Retrieval-Augmented Generation (RAG), NLP, Hugging Face, PyTorch, Gradio

Tools & Engineering: Docker, Git, Maven, JUnit, Postman, Oracle WebLogic, concurrency, integration testing

Professional Experience

Oracle | Application Developer

Aug 2024 – Present

Oracle Utilities Network Management System (NMS) | Hyderabad, India

- Develop Java, SQL, and PL/SQL enhancements across outage management, switching, SCADA, power-flow, FLISR, and feeder-load management workflows.
- Implement application features and defect fixes across interconnected NMS modules, maintaining configuration compatibility and end-to-end workflow behavior.
- Diagnose production and test failures by correlating application logs, database records, configuration files, and runtime behavior to isolate root causes.
- Built Flexie, an OJET-based chatbot for FLEX, converting recurring workflows into interactive cards and reducing manual work by 30%.
- Validate module behavior, deployments, and post-release changes; collaborate with engineers and stakeholders on requirements, defect reviews, and production issue resolution.

Selected Projects

Reliable Webhook Delivery Service | Go, PostgreSQL, REST APIs, Docker

- Built an asynchronous webhook service with PostgreSQL persistence and a bounded goroutine worker pool; implemented lease-based crash recovery, exponential-backoff retries, and failed-delivery replay.
- Added HMAC-signed payloads and an idempotent demo receiver; tested concurrent job claims, worker crashes, and duplicate delivery through integration tests and a Docker Compose recovery demo.

Distributed Observability Platform | Java, Spring Boot, Kafka, Docker

- Built a backend observability application combining logs, operational metrics, and service-health monitoring with Kafka-based asynchronous log ingestion.
- Added distributed tracing and real-time alerts to support investigation of service behavior and operational issues.

Resume-Aware AI Interviewer | Python, RAG, Hugging Face, PyTorch, Gradio

- Built an AI interviewer using retrieval-augmented generation and Hugging Face models to generate resume-aware questions across programming, reasoning, and domain topics.

Education & Achievements

Vasavi College of Engineering, Hyderabad

2020 – 2024

B.E., Computer Science | GPA: 9.05/10

Young Excellence Award, Oracle (2025) – recognized for performance among new joiners.

Qualified GATE during the third year of undergraduate study.
